

M.A.P.S.

Modern Application Packaging Service

“Each application is assessed for compliance with project specific requirements and customer standards; then validated and tested against the target platform.

The results are consistent high-quality packages, ready for deployment.”

Building on the years of experience in application assessment, remediation and testing, Readiness offers an Azure based automated packaging factory solution that delivers:

- Application Discovery
- Compatibility and Suitability Assessments
- Packaging to client standards
- Automated QA
- Installation validation and testing
- Publishing to Intune
- UAT Facilitation

The onboarding process for Readiness is simple and requires a single step: the client uploads their application packages to the secure, designated Readiness storage area. That’s it!

Custom assessment checks, client branded reports and tuned deployment packages create a streamlined, efficient process for delivering consistent quality.

Features

- Proprietary capture and packaging technology
- Automated assessments and application testing
- Integrated remediation and update technology
- Automated packaging documentation
- Package deployment automation

Key technologies:

- Platforms: Windows desktops and servers, Citrix and Microsoft Azure
- Package formats: MSI Installer, App-V, MSIX
- Deployment: SCCM, Intune

There are several optional modules including:

- Compatibility, suitability assessments
- Automated conversion and packaging
- Automated Testing and Certification
- Portfolio Assessment and Custom Reporting

Benefits

- Web-based, zero infrastructure packaging factory
- Secure, dedicated instances, builds, and file storage
- Trusted, in-production processes that deliver consistent, compliant and tested packages
- Support for client branding, custom builds and project specific standards
- API-driven automation solutions delivers scale and integration across projects and toolsets
